

LightSpeed Internet Filtering

QACPS uses LightSpeed for their Internet filtering.

An Internet policy is automatically assigned based on your Novell Login and if you are using a computer with a Windows OS.

If you are using a non-windows OS like found on an IPAD, you will get a LightSpeed login page.

Enter your Novell Login ID and Password. This will allow that device to use your assigned Internet Policy for one hour before it prompts you again to enter your network credentials.

The screenshot shows a web browser window titled "Lightspeed Systems Content Filtering - Windows Internet Explorer". The address bar contains the URL: <http://kiettc.qacps.k12.md.us/contentfiltering/blocked.aspx?id=11547240485670106701>. The browser's menu bar includes File, Edit, View, Favorites, Tools, and Help. The page content is on a dark grey background and features the following text:

Enter your Novell UserID and Password below. The Internet Server was unable to automatically identify you, and requires your username and password for authentication before allowing you to browse the Internet.

Below this text is a white rectangular form with two input fields:

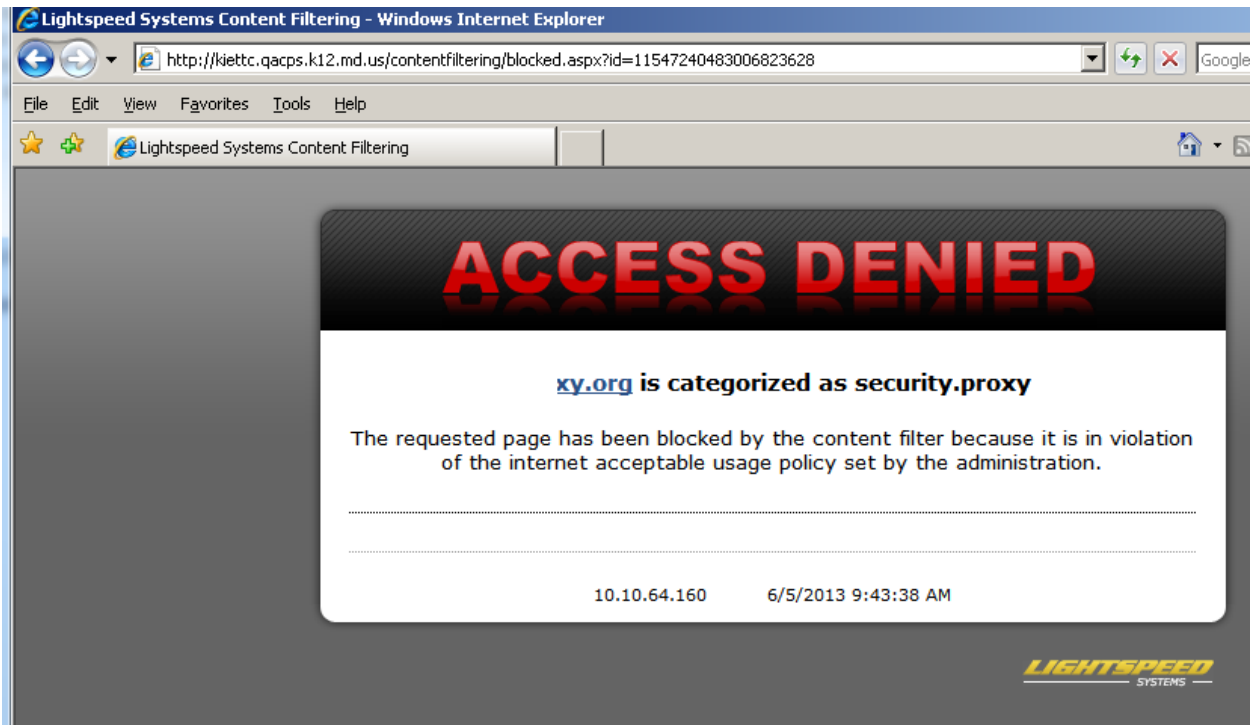

Username:

Password:

Below the password field is a "Login" button.

At the bottom of the page, there is a footer with the IP address "10.10.64.160" and the timestamp "6/5/2013 9:29:55 AM".

If you try to get to a website and you get this page.

This means that the current Internet Policy assigned to the computer can't visit this page. Teachers have more access than students. Certain websites can only be visited by staff while student will receive the block page above. If you need a website unblocked, then email your principal with the website URL, the reason you need it unblock and if it needs to be unblocked for staff or staff & students.
